ON-TERMINAL FUMIGATION SERVICES

TENTED FUMIGATION IS NOW AVAILABLE AT EAST BLAIR ONE (EB1)

Countries like Australia, New Zealand and Chile work to prevent non-native insects (like the Marmoseted Stink Bug), from entering their country on transported RO/RO cargo. The species would have a negative ecological effect if allowed to populate as an "invasive species".

Export cargo must be fumigated 72 hours before being loaded to a vessel.

"Tenting" is the process of releasing fumigation chemicals into a covered area containing the cargo (i.e. machinery and equipment). This kills off any prohibited insects that may be hitching a ride on the cargo.

- **REDUCED DRAYAGE COST**
- **CONVENIENT FUMIGATION FOR BREAKBULK CARGO**
- **AQIS STANDARD WASH CAPACITY**
- **ON-TERMINAL FUMIGATION AVAILABLE**
